Transportation Modeling Training 31/05/2024

Last week, we successfully held the first session of our transportation modeling trainings, focusing on **PTV Visum**! The training was delivered by Shaleen Srivastava with support from the modeling team of Parabol, a partner in the project team.

The aim of the training was to introduce the fundamentals of PTV Visum—one of the leading transportation planning software tools—to the İzmir Metropolitan Municipality (IMM) team, enabling them to use it effectively in their projects. IMM participants gained in-depth knowledge and hands-on experience in transportation modeling and policy analysis.

The training covered the entire process of running a transportation model: software installation, data input, model calibration, and interpretation of results. By the end of the program, participants were equipped with the skills and tools necessary to independently carry out modeling tasks and contribute to the development of effective transportation policies.
