

SUMP Türkiye Physical Training No. 3

29-30 July 2024

The 3rd SUMP Türkiye Physical Training, which provided an in-depth exploration of Intelligent Transport Systems (ITS) and Big Data applications, took place over two days with the participation of municipalities and experts from across Türkiye.

Key highlights from the training:

On the first day, the fundamental concepts of ITS and Big Data applications were covered, with a focus on how these technologies can provide solutions to transportation challenges in Türkiye. Participants gained valuable insights into data collection, management, and analysis techniques. The program, enriched with theoretical sessions, practical examples, and interactive discussions, aimed to demonstrate the benefits of ITS and Big Data.

On the second day, the focus shifted to modern ITS applications, future trends, and the integration of various transport modes. Participants were provided with the knowledge and tools required to implement effective ITS solutions in their respective fields. Throughout the training, both global and national examples were explored to illustrate how these applications can be successfully implemented.
