

Measures List Technical Workshop

25/09/2024

A technical workshop was held to refine the long list of potential measures into a short list for the SUMP İzmir Project. During the session, the Project Technical Support Team (TST) presented the results of the Multi-Criteria Analysis (MCA), the proposed short list of measures, and the recommended approach for measure packages to experts from relevant departments of İzmir Metropolitan Municipality, its affiliates, and district municipalities.

Participants were divided into groups based on their expertise and areas of work to review the selected measures. Following this exercise, they provided feedback on the categorization of different measure packages. The workshop concluded with discussions on the governance of the measure packages, ensuring a structured approach to their implementation.
